

K4I Interview

In essence, energy transition is ***an innovating society***. Moreover, it will be one of the major challenges in EU of the 21st century.

As a consequence, a priority has to be given to prepare ***the young talents*** of today: it is their future, they will create it and they will live in it.

Also, ***all stakeholders*** will be committed to jointly play the game: people, politics, education, energy companies, “new” companies. All will co-own the end result.

For this reason and to speed up the process of making the right choices, where society itself is in an ever increasing turbulence, we need an ***open innovation culture***.

Places facilitating the open innovation culture have to be created: let there be ***breeding places*** where the future of ***EU***, as we like it to be there, ***will be “game played”*** and developed.

EnTranCe is such a place. As it has been made clear in the lunch debate, young talents who are already connected to EnTranCe do not just comply, they even are close to proclaiming ***the energy transition as a revolution!***
