

Living Labs Water Indonesia

Improving Ecosystem services from Delta Areas!

25 November 2020, 11.00-12.00 CET (17.00-18.00 WIB)

Virtual platform: Zoom

You are invited to participate in this online WINNER session that will bring together core participants from Living Lab initiatives in various parts of Indonesia. We will share new developments, findings and challenges of our Living Labs which focus on river watershed management, river pollution, agroforestry, coastal plastic pollution, and peat rehabilitation.

We will illustrate and discuss how Living Labs can be used to address so called wicked problems in Delta Areas. We will specifically address the role of students and research in this concept. Participants are challenged by questions and are also asked to think whether and how they could take part in one of the ongoing Living Labs initiatives.

Speakers

Dr. Peter van der Meer – Associate Professor oil palm and tropical forests, Van Hall Larenstein University of Applied Sciences (chair)	
Prof. Toine Smits – Professor of Sustainable Water Management, Radboud University (plenary 1)
